Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Census of Agriculture,

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Questionnaires

HIGHLIGHTS

- o According to the 1986 Census of Agriculture the number of farms in Manitoba declined 7% to 27,336 from 1981. The number of farms with gross sales under \$50,000 decreased while the number of farms with gross sales of \$50,000 and over increased. Farms with \$50,000 and over gross sales represented 43% of all census farms in 1986.
- o The following areas under crops reported significant increases: canola up 63% to 977,057 acres (395 400 hectares); durum wheat up 46% to 379,885 acres (153 733 hectares); and winter wheat up 264% to 62,584 acres (25 326 hectares). Semi-dwarf spring wheat was enumerated as a separate category in 1986. Manitoba operators seeded 324,266 acres (131 225 hectares) of this crop in 1986.
- o Manitoba's potato area increased 13% to 46,417 acres (18 784 hectares) in 1986. Manitoba potato operators have the largest average potato area that is 228 acres (92 hectares) of any province.
- o The total number of cattle and calves declined 5% to 1,114,720 with the number of dairy cows declining 22% to 64,967. The total number of pigs increased 22% from 1981 to 1,071,195 in 1986.
- o The Census also reported changes in management practices. The area sprayed for weeds and brush control increased 42% and the area sprayed for insects and disease control increased 60%.

FAITS SAILLANTS

- o D'après les données du recensement de l'agriculture de 1986, le nombre de fermes du Manitoba a chuté de 7% de 1981 à 1986 pour s'établir à 27,336. Le nombre de fermes dont les ventes brutes sont inférieures à 50,000\$ a diminué tandis que le nombre de fermes dont les ventes brutes s'élèvent à 50,000\$ ou plus a augmenté. Les fermes dont les ventes brutes sont de 50,000\$ ou plus ont représenté 43% des fermes de recensement en 1986.
- o Les superficies en culture suivantes ont enregistré des hausses: la culture du canola s'est accrue de 63% pour s'étendre sur 977,057 acres (395 400 hectares), celle du blé durum, de 46% pour atteindre 379,885 acres (153 733 hectares) et celle du blé d'hiver, de 264% pour occuper 62,584 acres (25 326 hectares). En 1986, on a considéré le blé de printemps demi-nain, comme une catégorie distincte. Les exploitants du Manitoba ont ensemencé 324,266 acres (131 225 hectares) de cette culture en 1986.
- o Au Manitoba, la superficie ensemencée de pommes de terre s'est accrue de 13% pour s'élever à 46,417 acres (18 784 hectares) en 1986. Les exploitants du Manitoba exploitent en moyenne la plus grande superficie ensemencée de pommes de terre, soit 228 acres (92 hectares), que toute autre province.
- o Le nombre total de bovins et veaux a chuté de 5% pour s'établir à 1,114,720. Pour sa part, le nombre de vaches laitières a baissé de 22% pour s'établir à 64,967. Le nombre de porcs s'est accru de 22% par rapport à 1981 pour s'élever à 1,071,195 en 1986.
- o Le recensement de l'agriculture a aussi permis de relever des changements dans les pratiques de gestion. La superficie des terres traitées contre les mauvaises herbes a augmenté de 42%, et celle des terres traitées contre les insectes, de 60%.

INTRODUCTION

The Census of Agriculture has been taken every ten years from 1871 to 1951 and every five years since 1951. It provides statistics on crops, livestock, farm land, labour, capital and many other variables that are of interest to the public and private sectors.

This publication presents the results of the 1986 Census of Agriculture. The introduction includes explanations of questions used and contains some indicators of the quality of the data. The tabular material is presented in four sections. The first section presents data for the province, agricultural regions (crop districts) and census divisions. The second section consists of cross-classified data for the province. The third section contains historical data for the province. The fourth section contains selected data at the census division and census consolidated subdivision levels. A fifth section (appendices) contains a list of those census divisions and census consolidated subdivisions for which data were combined. Also, included is a copy of the 1986 Census of Agriculture questionnaire. Reasons why the questions were asked are on the last page of the questionnaire. All data refer to June 3, 1986 unless otherwise specified in the content of the tables.

Users are encouraged to read the following pages before using this publication.

PROCEDURES

The 1986 Census of Agriculture was collected with the 1986 Census of Population. The census representatives were asked to inquire at each household where they made contact, if anyone in the household operated an agricultural holding. Census representatives were also asked to identify all agricultural operations and the corresponding operators. Each operator was asked to complete an agriculture questionnaire. The completed questionnaires were edited by the census representatives and forwarded to Statistics Canada's Head Office in Ottawa. The information on the questionnaires was converted to machine readable form, checked for consistency, validated by comparing to other sources and summarized for public release.

DEFINITIONS

Census Farm

This term is defined in the 1986 Census of Agriculture as a farm, ranch or other agricultural holding with sales of agricultural products during the past 12 months of \$250 or more. Operations which anticipated sales of \$250 or more in 1986 were also included.

INTRODUCTION

Le recensement de l'agriculture a eu lieu tous les dix ans de 1871 à 1951 et tous les cinq ans depuis 1951. Il présente des statistiques sur les cultures, le bétail, les terres agricoles, la main-d'œuvre, le capital et bien d'autres variables susceptibles d'intéresser les secteurs public et privé.

Cette publication présente les résultats du recensement de l'agriculture de 1986. L'introduction comporte des explications relatives aux questions posées dans le questionnaire du recensement de l'agriculture et renferme certains indicateurs de la qualité des données. La section réservée aux tableaux comprend quatre segments. Le premier segment présente des tableaux qui compilent les données au niveau de la province, des régions agricoles (districts de culture) et des divisions de recensement. Le deuxième renferme des données recoupées au niveau provincial. Le troisième comprend des données historiques de la province. Le quatrième se compose de données sélectionnées aux niveaux de la division de recensement et de la subdivision de recensement unifiée. Un cinquième segment (annexes) contient la liste des divisions de recensement et des subdivisions de recensement unifiées pour lesquelles les données sont regroupées. Un exemplaire du questionnaire utilisé lors du recensement de l'agriculture de 1986 est aussi inclus. Les raisons précisant à quoi servent les questions du recensement se trouvent à la dernière page du questionnaire. Toutes les données se rapportent au 3 juin, 1986 sauf indication contraire dans le contenu des tableaux.

Les utilisateurs sont priés de parcourir ces pages avant d'utiliser cette publication.

PROCÉDURE

Le recensement de l'agriculture de 1986 a été effectué en même temps que le recensement de la population de 1986. On a demandé aux agents recenseurs de s'enquérir, auprès de chaque ménage contacté, si un membre du ménage était exploitant agricole. On leur a demandé aussi d'identifier toutes les exploitations agricoles de leur secteur de dénombrement et les exploitants correspondants. On a demandé à chaque exploitant de remplir le questionnaire sur l'agriculture. Les questionnaires remplis étaient vérifiés par l'agent recenseur et envoyés au bureau central de Statistique Canada, à Ottawa. Les renseignements consignés dans les questionnaires ont été convertis sous une forme lisible à la machine, vérifiés pour assurer leur cohérence, validés par comparaison avec d'autres sources et résumés en vue de leur diffusion.

DÉFINITIONS

Ferme de recensement

Cette expression est définie au recensement de 1986 comme désignant une ferme, un ranch ou une autre exploitation agricole dont les ventes de produits agricoles se sont élevées à 250\$ ou plus au cours des 12 derniers mois. L'expression comprend également les exploitations dont les ventes prévues s'élevaient à 250\$ ou plus en 1986.

Standard Geographical Unit

The standard units for collecting and publishing geographical statistics in Statistics Canada are province, territory, census division, census subdivision and census consolidated subdivision. The units, as of January 1, 1986, are presented in Volume 1 of the **Standard Geographical Classification Manual**, Catalogue No. 12-571. Data in Census of Agriculture publications are summarized at any one of four geographical levels, i.e., province, agricultural region (crop district), census division (county) and census consolidated subdivision (township, rural municipality, etc.). Combinations of census subdivisions add to census consolidated subdivisions which add to census divisions. Combinations of census divisions add to agricultural regions with the exception of Saskatchewan and Prince Edward Island. In Saskatchewan only consolidated subdivisions add to agricultural regions. In Prince Edward Island, there are no agricultural regions. Certain census consolidated subdivisions (and some census divisions) contained few farms in 1986. The data for each of these have been merged with a geographically adjacent unit. A list of these geographic amalgamations is given in the appendices.

EXPLANATION OF QUESTIONS

Question 1 - Operator

This term is used in the Census of Agriculture to designate the person who is responsible for the day-to-day decisions made in the operation of the holding. As only one operator is listed for each census farm, the number of operators is the same as the number of census farms. If the holding was operated as a partnership, only one partner was considered to be the operator.

Questions 2 and 3 - Residence

The operator was asked to indicate the number of months he resided on the holding during the 12 months prior to June 3, 1986.

The operator was also asked whether he operated this holding one year ago, on June 3, 1985. This was an office-use question only.

Question 4 - Type of Organization

The operator was asked to indicate his farm organization type as:

- (1) An individual or family operation
- (2) A partnership with a written agreement
- (3) A partnership with no written agreement
- (4) A legally constituted company:
 - (a) with the shares owned mostly by him and his family, or
 - (b) with most of the shares owned by some other person(s) or business
- (5) Other types:

Institutions, community pastures, land operated privately for an estate or trust company, Hutterite colonies and co-operative farms.

Unité géographique type

Les unités géographiques types pour la collecte et la publication de statistiques à Statistique Canada sont la province, le territoire, la division de recensement et la subdivision de recensement unifiée. Ces unités, telles qu'elles existaient au 1er janvier 1986, sont présentées dans le volume 1 du **Manuel de la classification géographique type**, no 12-571 au catalogue. Les données sommaires des publications du recensement de l'agriculture sont présentées pour l'un ou l'autre des quatre niveaux géographiques qui sont la province, la région agricole (district agricole), la division de recensement (comté) et la subdivision de recensement unifiée (canton, municipalité rurale, etc.). Les subdivisions de recensement sont combinées pour former des subdivisions de recensement unifiées qui elles-mêmes sont combinées pour former des divisions de recensement. Des combinaisons de divisions de recensement forment des régions agricoles sauf en Saskatchewan et à l'Île-du-Prince-Édouard. En Saskatchewan, seules des combinaisons de subdivisions de recensement unifiées forment des régions agricoles. À l'Île-du-Prince-Édouard, il n'y a pas de régions agricoles. En 1986, certaines subdivisions de recensement unifiées (et quelques divisions de recensement) ne comptent que quelques fermes. Les données de chacune d'elles ont été combinées avec celles d'une région voisine. Une liste des regroupements géographiques est contenue dans les annexes.

EXPLICATION DES QUESTIONS

Question 1 - Exploitant

On utilise ce terme dans le cadre du recensement de l'agriculture pour désigner la personne qui prend au jour le jour les décisions nécessaires à la bonne marche de l'exploitation. Comme un seul et unique exploitant est indiqué pour chaque ferme de recensement, le nombre des exploitants est le même que celui des fermes de recensement. Si l'exploitation est une société en nom collectif, un seul associé est considéré comme étant l'exploitant.

Questions 2 et 3 - Résidence

On demandait à l'exploitant d'indiquer le nombre de mois qu'il avait habité son exploitation au cours des 12 mois précédant le 3 juin 1986.

On demandait aussi à l'exploitant si la ferme était exploitée par lui il y a un an. Cette question était pour l'usage du bureau seulement.

Question 4 - Forme juridique

On demandait à l'exploitant d'indiquer la forme juridique de son exploitation:

- (1) Ferme individuelle ou familiale
- (2) Société en nom collectif avec convention écrite
- (3) Société en nom collectif sans convention écrite
- (4) Compagnie juridiquement constituée:
 - a) dont la plupart des actions sont détenues par lui ou sa famille
 - b) dont la plupart des actions sont détenues par d'autres personnes ou entreprises
- (5) Autres formes juridiques:

Institutions, pâturages communautaires, terres exploitées à titre privé ou pour le compte d'une succession ou d'une fiducie, colonies huttérites et fermes coopératives.

Question 5 - Unit of Measurement

Operators were asked to indicate the unit in which the land areas were reported: acre, hectare or arpent.

Questions 6 to 9 - Location: Area Owned, Rented or Leased

Operators were asked to divide their land into area owned and area rented from governments or others. Area owned includes land that an operator or spouse holds under title, homestead law, purchase contract, or as an heir or trustee of any individual estate and land more or less permanently occupied by a squatter. Areas rented or leased from others include land rented or leased on a cash basis, rented on a share crop basis and areas used rent-free. Areas used under lease, permit or licence agreement with federal, provincial or municipal governments were reported under "leased from government". A hired manager was asked to report whether the land he operated was owned or rented by his employer.

Community pastures, which were operated under a lease agreement with federal, provincial or municipal governments were reported by the government agencies involved. A decision was made that all community pasture land owned by a provincial government or government agency, that was used by farm operators for pasturing livestock, was to be designated as rented. In the past, not all community pasture land was classified as rented, and its designation depended on the tenure status reported by the person or agency that completed the questionnaire. By standardizing the community pasture land as rented, more land is thus found in the rented category than in previous censuses. This impact on rented land is only meaningful in those provinces where community pastures are significant.

Respondents were asked to report all land operated no matter where the land is geographically located. When tabulating the results, the entire area of the farm was included in the same geographic area as the operator's headquarters.

Questions 10 to 97 - Area of Field Crops and Horticultural Products

The area of field crops in 1986 represents the areas seeded or to be seeded for harvest in 1986, as reported by the respondent on June 3, 1986.

Actual harvested areas may vary from the census report due to changes in planting intentions or crop failure which occurred after the date of enumeration. In the case of hay land, the area was to be reported only once, even if two or more cuttings were taken. Other fodder crops have been combined with the data for tame hay.

The area of potatoes, vegetables, fruit trees, cultivated berries and grapes, sod and nursery products was to be reported when these products were being grown for sale.

Question 5 - Unité de mesure

On demandait aux exploitants d'indiquer l'unité de mesure utilisée pour déclarer la superficie des terres, soit l'acre, l'hectare ou l'arpent.

Questions 6 à 9 - Emplacement: superficie possédée, louée ou louée à bail

On demandait aux exploitants de répartir leurs terres en superficies possédées en propre ou louées des gouvernements ou des particuliers. Par superficie possédée en propre, on entend notamment les terres que l'exploitant ou sa conjointe détient en vertu d'un titre de propriété, d'une loi sur les exploitations agricoles, d'un contrat d'achat ou à titre d'héritier ou de fiduciaire d'une succession individuelle, et les terres occupées de façon plus ou moins permanente par un squatter. Par superficie louée ou louée à bail des particuliers, on entend notamment les terres louées ou louées à bail des particuliers moyennant paiement en espèces, exploitées à la part (métayage) et les superficies utilisées sans loyer à payer. Les superficies utilisées en vertu d'une entente de bail, de permis ou de licence avec le gouvernement fédéral ou un gouvernement provincial ou municipal ont été déclarées à la rubrique: "louée à bail des gouvernements". On demandait à chaque gérant de déclarer si la terre qu'il exploitait était possédée ou louée par son employeur.

Les pâturages communautaires exploités en vertu d'une entente avec le gouvernement fédéral ou un gouvernement provincial ou municipal ont été déclarés par l'organisme gouvernemental concerné. Il a été décidé que toute terre possédée par un gouvernement provincial ou un organisme gouvernemental, et utilisée par des exploitants agricoles pour le pacage du bétail, serait classée comme terre louée. Par le passé, ces terres n'étaient pas toutes classées comme terre louée; leur classement dépendait du mode d'occupation déclaré par la personne ou l'organisme qui remplissait le questionnaire. En uniformisant la méthode de déclaration des pâturages communautaires comme terre louée, plus de terres ont été déclarées comme terre louée que lors des recensements antérieurs. Cet impact sur les terres louées n'a vraiment d'importance que dans les provinces où les pâturages communautaires sont nombreux.

On demandait aux répondants de déclarer toutes les terres exploitées quel qu'en fût l'emplacement géographique. Une fois les résultats totalisés, la superficie entière de l'exploitation est incluse dans la région géographique dans laquelle se trouve le siège social de l'exploitant.

Questions 10 à 97 - Superficie des grandes cultures et produits horticoles

La superficie des grandes cultures en 1986 représente les superficies ensemencées (ou devant l'être) pour la récolte en 1986, telles que déclarées par le répondant le 3 juin 1986.

Les superficies effectivement récoltées peuvent différer des déclarations du recensement par suite d'un changement dans les intentions d'ensemencement ou d'une mauvaise récolte après la date du dénombrement. Dans le cas des terres à foin, la superficie ne devait être déclarée qu'une seule fois, même s'il y a eu deux coupes ou davantage. Les données sur les autres cultures fourragères ont été combinées avec celles du foin cultivé.

La superficie cultivée en pommes de terre, légumes, arbres fruitiers, petits fruits cultivés et raisin, gazon et produits de pépinière, devait être déclarée si ces produits étaient destinés à la vente.

Questions 98 to 105 - Summary of Land

Improved land

The area of improved land consists of the total of the areas reported for the following four categories:

- (1) **Area under crops** - This category includes the total area seeded or to be seeded for harvest in 1986. Included are all field crop areas, plus the areas of fruits, vegetables, sod and nursery products. The sum of the individual crops is not necessarily equal to the total area under crops since occasionally two crops may be harvested from the same land in one year and crops area reported in fractions are converted to whole numbers where applicable.
- (2) **Improved pasture** - All land which was being used for pasture or grazing and which has had some improvements is included. Improvements include cultivation, drainage, irrigation, fertilization, seeding, or spraying for brush and weed control.
- (3) **Summerfallow** - The operator was asked to include land from which no crop was to be harvested in 1986, but which was to be cultivated, worked or sprayed during the year for weed control or moisture conservation.
- (4) **Other improved land** - This category includes barnyards, home gardens, greenhouses, mushroom houses, lanes and roads on farms. It also includes idle cultivated land that is neither summerfallowed nor cropped and newly broken land that had not been seeded with a crop.

Unimproved land

The area of unimproved land consists of the total area reported for the following three categories:

- (1) **Unimproved land for pasture, grazing or hay** - This includes native pasture, native hay, rangeland, grazable bush etc., used for the grazing or feeding of livestock.
- (2) **Woodland** - This includes woodlots, land leased for cutting, sugar bush and cut-over land with young growth which has or will have value as timber, fuelwood or Christmas trees. The area of trees planted for wind-breaks is also included. It excludes large timber tracts which are run as a separate business from the farm.
- (3) **Other unimproved land** - This includes bogs, marshes, wasteland and all other non-productive areas.

Questions 106 to 109 - Greenhouses and Mushroom Houses

Operators were asked to indicate the area of their greenhouses. A four-part question pertaining to four major greenhouse products was asked.

Operators were asked to indicate the mushroom growing area.

Questions 98 à 105 - Utilisation de la terre

Terre améliorée

La superficie des terres améliorées représente le total des superficies déclarées dans les quatre catégories suivantes:

- (1) **Terre en culture** - Cette catégorie englobe la superficie totale ensemencée (ou devant l'être) pour la récolte en 1986. Elle comprend la superficie totale de toutes les grandes cultures, ainsi que les superficies cultivées en fruits, légumes, gazon et produits de pépinière. La somme des cultures individuelles n'est pas nécessairement égale à la superficie totale en culture étant donné qu'à l'occasion on peut réaliser deux récoltes sur la même terre pendant une année et que les superficies des récoltes déclarées en fractions sont converties en nombre entier quand c'est approprié.
- (2) **Terre améliorée pour le pâturage** - Cette catégorie comprend toutes les terres utilisées pour le pâturage ou pacage ayant bénéficié d'une amélioration par mise en culture, drainage, irrigation, fertilisation, ensemencement ou pulvérisation pour le contrôle des broussailles et des mauvaises herbes.
- (3) **Jachère** - On demandait aux exploitants d'inscrire sous cette rubrique les terres qui ne produiraient aucune récolte en 1986, mais qui seraient travaillées, sarclées ou pulvérisées durant l'année pour combattre les mauvaises herbes ou conserver l'humidité.
- (4) **Autre terre améliorée** - Cette catégorie englobe la superficie des cours de ferme, jardins potagers, serres, champignonnières, chemins et routes sur la ferme. Elle comprend également les superficies de terre en culture qui sont inexploitées, mais qui ne sont ni en jachère, ni en culture, et les superficies des terres récemment défrichées qui n'ont pas été ensemencées.

Terre non améliorée

La superficie des terres non améliorées représente la superficie totale déclarée dans les trois catégories suivantes:

- (1) **Terre non améliorée pour le pâturage, le pacage ou le foin** - Cette catégorie englobe les pâturages ou pacages naturels, les grandes prairies, les prés non améliorés etc., utilisés pour le pacage ou l'alimentation du bétail.
- (2) **Terre à bois** - Cette catégorie englobe les boisés, la terre louée pour la coupe, les érablières et la terre déboisée recouverte de jeunes pousses qui ont ou auront de la valeur comme bois d'oeuvre, bois de chauffage ou arbres de Noël. Elle comprend la superficie couverte de plantations brise-vent, mais non les grandes sections de coupe du bois exploitées comme entreprise distincte de la ferme.
- (3) **Autre terre non améliorée** - Cette catégorie englobe les marais, marécages, tourbières, terres incultes et autres terres non productives.

Questions 106 à 109 - Serres et champignonnières

On demandait aux exploitants d'indiquer la superficie de leurs serres. Une question en quatre parties ayant trait aux quatre principaux produits de serre était posée.

On demandait aux exploitants d'indiquer la superficie cultivée de leurs champignonnières.

Questions 110 to 121 - Poultry

Operators were asked to report all poultry located on the holding on June 3, 1986 regardless of ownership.

Operators were asked to report their 1985 production of eggs, chickens and turkeys.

Questions 122 to 149 - Livestock

Operators were asked to report all animals located on the holding on June 3, 1986 regardless of ownership, as well as any animal owned but pastured on a community pasture, grazing co-operative or public land. They were asked **not** to include animals owned but kept on a farm, ranch or feedlot operated by someone else.

Operators were also asked to report the number of registered cattle and calves, pigs, and sheep and lambs.

Questions 150 to 152 - Commercial Fertilizer Use

Operators were asked to report the total area fertilized, the number of metric tonnes used and the forms or types of fertilizer applied in 1985. Each area to which fertilizer was applied was counted only once regardless of the number of applications. Lime or manure was not to be included.

Questions 153 and 154 - Spraying and Dusting

The area to which sprays or dust were applied in 1985 for control of weeds and brush and/or insects and disease was reported. Included were herbicides, fungicides, insecticides and soil sterilants. Each area was counted only once regardless of the number of applications.

Questions 155 to 157 - Irrigation

Irrigation is defined as the application of water to the land by controlled means. Operators were asked whether the land was irrigated in 1985, and if so, to report the area irrigated by various systems, and the source of the water used.

Questions 158 and 159 - Subsurface Drainage

Subsurface drainage is a system of tiles or perforated tubing installed beneath the soil surface to drain water **from** the land. Operators were asked whether there was a subsurface drainage system on the land they operated, and to report the area of land drained by this system.

Questions 160 to 172 - Farm Vehicles, Machinery and Equipment

Operators were asked to report the number and value of agricultural machinery on the holding on June 3, 1986, whether the machinery was owned by the operator or someone else. Old machines no longer in use were not to be reported. Equipment owned in partnership was to be reported on the holding where it was located.

Questions 110 à 121 - Volailles

On demandait aux exploitants de déclarer toutes les volailles qui se trouvaient dans l'exploitation le 3 juin 1986, quel qu'en fût le propriétaire.

On demandait aux exploitants de déclarer leur production d'oeufs, de poulets et de dindons en 1985.

Questions 122 à 149 - Bétail

On demandait aux exploitants de déclarer tous les animaux qui se trouvaient dans l'exploitation le 3 juin 1986, quel qu'en fût le propriétaire, ainsi que tous les animaux qui leur appartenaient mais qui étaient en pacage dans un pâturage communautaire ou public, ou dans un pâturage d'une association coopérative. On leur demandait de **ne pas** inclure les animaux qui leur appartenaient mais qui étaient gardés dans une ferme, un ranch ou un parc d'engraissement exploité par autrui.

On demandait également aux exploitants de déclarer le nombre d'animaux enregistrés pour ces catégories: gros bovins et veaux, porcs, et moutons et agneaux.

Questions 150 à 152 - Engrais commerciaux

On demandait aux exploitants de déclarer la superficie totale fertilisée, le nombre de tonnes métriques et le type d'engrais commerciaux épanchés en 1985. Chaque superficie n'était comptée qu'une fois, quel qu'en fût le nombre d'épandages. La chaux et le fumier n'étaient pas comptés comme engrais commerciaux.

Questions 153 et 154 - Pulvérisation et épandage de pesticides

La superficie ayant fait l'objet d'une pulvérisation ou d'un épandage en 1985 contre les mauvaises herbes et les broussailles et/ou les insectes et les maladies était déclarée. Entrent dans cette catégorie de produits chimiques, les herbicides, fongicides, insecticides et substances stérilisantes. Chaque superficie n'était comptée qu'une fois, quel que fût le nombre d'épandages.

Questions 155 à 157 - Irrigation

Par irrigation, on entend l'aspersion de la terre par des moyens contrôlés. On demandait aux exploitants agricoles de déclarer si la terre avait été irriguée en 1985 et, dans l'affirmative, de préciser la superficie irriguée par divers systèmes et la source de l'eau utilisée.

Questions 158 et 159 - Drainage souterrain

Le drainage souterrain consiste en un réseau de tuyaux de drainage ou de tubes dotés de perforations installés sous la surface du sol pour évacuer l'eau de la terre. On a demandé aux exploitants de déclarer s'il y avait un système de drainage souterrain sur la terre qu'ils exploitaient et de déclarer la superficie drainée par ce système.

Questions 160 à 172 - Véhicules de fermes, machines et matériel

On demandait aux exploitants de déclarer le nombre de machines agricoles qui se trouvaient dans l'exploitation le 3 juin 1986 et leur valeur quel qu'en fût le propriétaire. Les vieilles machines qui ne servaient plus étaient exclues. Le matériel possédé en co-propriété devait être déclaré dans l'exploitation où il se trouvait.

The value to be reported for farm machinery was the present market value that is, the amount for which machinery and equipment would sell if there was a willing buyer and a willing seller and not a forced sale. It might be explained as the price the machine would likely bring in its present condition at an auction sale.

For the first time, operators were asked whether there was a computer on the holding used principally in managing their farm business. The data for the number of computers are contained in Tables 20 to 23 only.

Question 173 - Market Value of Land and Buildings

Operators were asked to report the value for land and buildings. The value reported was to be an estimate of the present market value.

Questions 174 to 186 - Farm Business Expenses

Operators were asked to report all farm business operating expenses incurred during 1985 whether already paid or to be paid by the operators or others. If the operator did not keep records on a calendar year basis, expenses were reported for the last complete fiscal year.

There were 17 itemized expense questions and any expenses not itemized were combined in an all other expenses question. The operator was instructed not to include capital cost allowances.

Details regarding inclusions and exclusions are specified in each question on the questionnaire.

Questions 187 and 188 - Hired Agricultural Labour

Total weeks of paid agricultural labour (15 years of age and over) hired during the past 12 months were reported. Year-round and seasonal labour were reported separately.

Any person doing agricultural work on the holding for wages, salary, commission or on a piece-rate or labour contract basis was reported as paid labour. This included paid managers and members of the operator's family receiving wages or salary.

Questions 189 to 191 - Forest Products and Maple Tappings

The value of forest products sold in 1985 included sales of Christmas trees, fuelwood, logs and pulpwood.

Operators were also asked to report the number of taps on maple trees in the spring of 1986.

Question 192 - Value of Agricultural Products Sold during 1985

Operators were asked to report the total gross value of agricultural products sold during 1985. In cases where records are not kept on a calendar year basis, operators were asked to report sales for the last complete fiscal year.

La valeur à déclarer pour les machines agricoles était la valeur marchande actuelle, c'est-à-dire le prix auquel la machine ou le matériel serait vendu s'il y avait un acheteur et un vendeur consentants, et non dans le cadre d'une vente forcée. Autrement dit, il s'agissait du prix qu'on aurait obtenu pour les machines dans leur état actuel, lors d'une vente aux enchères.

Pour la première fois, on demandait à l'exploitant s'il y avait un ordinateur utilisé principalement pour la gestion de l'exploitation agricole. Les données sur le nombre d'ordinateurs sont contenues dans les tableaux 20 à 23 seulement.

Question 173 - Valeur marchande de la terre et des bâtiments

On demandait aux exploitants de déclarer la valeur de la terre et des bâtiments. La valeur déclarée devait être une estimation de la valeur marchande actuelle.

Questions 174 à 186 - Dépenses de l'exploitation agricole

On demandait aux exploitants de déclarer toutes les dépenses de l'exploitation agricole encourues en 1985, qu'elles fussent déjà payées ou devaient être payées par l'exploitant ou par d'autres. Si l'exploitant ne tenait pas sa comptabilité en fonction de l'année civile, les dépenses déclarées devaient être celles du dernier exercice fiscal complet.

Il y avait 17 questions distinctes relatives aux dépenses. Toutes les autres dépenses non détaillées sont comprises dans une question relative à toutes les autres dépenses. On demandait à l'exploitant de ne pas tenir compte de l'allocation du coût en capital.

Les détails concernant les dépenses à inclure ou à exclure étaient précisés à chaque question du questionnaire.

Questions 187 et 188 - Main-d'oeuvre agricole engagée

Le nombre total de semaines de travail agricole rémunéré (personnes de 15 ans et plus) de la main-d'oeuvre engagée au cours des 12 derniers mois devait être déclaré. La main-d'oeuvre engagée toute l'année et la main-d'oeuvre saisonnière devaient être déclarées séparément.

Toute personne effectuant, dans l'exploitation, un travail agricole rémunéré contre salaire ou traitement, commission, rémunération à la pièce, ou selon un contrat de travail, devait être déclarée comme main-d'oeuvre rémunérée. Cette catégorie comprend les gérants rémunérés et les membres de la famille de l'exploitant touchant un salaire en argent.

Questions 189 à 191 - Valeur des produits de la forêt et de l'érable

La valeur des produits forestiers vendus en 1985 comprenait les ventes d'arbres de Noël, de bois de chauffage, de billes et de bois à pâte.

On demandait aussi aux exploitants de déclarer le nombre d'entailles d'érable faites au printemps de 1986.

Question 192 - Valeur des produits agricoles vendus en 1985

On demandait aux exploitants de déclarer la valeur brute des produits agricoles de leur exploitation vendus en 1985. Dans le cas où les dossiers n'étaient pas basés sur l'année civile, on leur demandait de déclarer les ventes du dernier exercice fiscal complet.

Value of agricultural products would include sales of all agricultural products, the value of the landlord's share of products sold (share rent), any Canadian Wheat Board payments received during 1985 regardless of the crop year to which they applied, cash advances for stored crops, patronage dividends, crop insurance, stabilization and deficiency payments, any marketing board and/or agency payments received during 1985, direct sales, i.e. roadside stands, farmers' markets, pick-your-own operations, etc., and income from custom work and machine hire. Value of agricultural products would not include the sale of capital items i.e. land, buildings or machinery, the sale of products received from land rented or leased to others, the value of forest products sold and products bought for resale.

Questions 193 and 194 - Off-farm Work

Operators were asked to report the number of days worked off the holding at paid agricultural and non-agricultural work during 1985.

DERIVED VARIABLES

Product Type

Each census farm was classified according to its predominant production enterprise. The method used involved the estimation of potential sales from the inventories of crops and livestock reported on the questionnaire. Each of these potential sales was accumulated to derive a potential total sales. The commodity or group of commodities which accounted for 51% or more of the total potential sales determined the product type assigned to that operation.

Capital Values

Included were the values of land and buildings, machinery and equipment (including automobiles), and livestock and poultry. Values for livestock and poultry reported in the census were derived from data on average farm prices for various types of livestock and poultry. The values for land and buildings, machinery and equipment were reported by the respondents on June 3, 1986.

CONVERSION

Imperial Measure to Metric Measure

This publication presents area data in metric (hectares) as well as imperial (acres) units. This conversion from acres to hectares was made by Statistics Canada using the factor 0.404 685 6 hectare equals one acre.

Arpens to Acres

In the province of Quebec, some respondents reported land areas in arpents. The conversion to acres was made by Statistics Canada using the factor one arpent equals 0.845 acre.

La valeur des ventes englobait la vente de tous les produits agricoles, la valeur de la part des produits agricoles vendus revenant au propriétaire (loyer à la part), les paiements de la Commission canadienne du blé reçus en 1985, peu importe l'année de culture à laquelle ils s'appliquaient, les avances versées sur le grain entreposé, les ristournes, les prestations d'assurance-récolte, les paiements de stabilisation et les paiements d'appoint, les paiements reçus des offices ou agences de mise en marché en 1985, les ventes directes comme étalages routiers, marchés, cueillette par le client etc., et le revenu provenant du travail à forfait et de la location de machines. La valeur brute ne comportait pas des ventes de biens en capital, par exemple les terres, les bâtiments ou la machinerie, des ventes de produits provenant des terres louées ou louées à bail à autrui, la valeur des produits forestiers vendus et des produits achetés en vue de leur revente.

Questions 193 et 194 - Travail hors exploitation

On demandait aux exploitants de déclarer le nombre de jours travaillés en dehors de leur exploitation à des travaux agricoles et non agricoles rémunérés en 1985.

VARIABLES DÉRIVÉES

Genre du produit

Chaque ferme de recensement était classée selon son activité de production prédominante. La méthode utilisée consistait à estimer les ventes potentielles provenant des stocks des cultures ou du bétail déclarés dans le questionnaire. Toutes ces ventes potentielles étaient regroupées pour arriver à une vente potentielle totale. Le genre du produit assigné à une opération était déterminé par un produit ou un groupe de produits dont la vente représentait 51% ou plus du total des ventes potentielles.

Valeur des biens en capital

La valeur des biens en capital comprenait la valeur des terres et bâtiments, des machines et matériel (y compris les automobiles) et du bétail et des volailles. La valeur du bétail et des volailles déclarés lors du recensement est dérivée à partir des prix moyens à la ferme des divers types de bétail et de volailles. La valeur des terres et bâtiments et la valeur des machines et du matériel sont celles déclarées par le répondant au 3 juin, 1986.

CONVERSION

Mesure impériale en mesure métrique

Cette publication présente les données sur les superficies en unité métrique (hectares) ainsi qu'en unité impériale (acres). La conversion d'acres en hectares a été faite à Statistique Canada en employant le facteur 0.404 685 6 hectare égale une acre.

Arpens en acres

Dans la province de Québec, certains répondants ont déclaré les superficies en arpents. La conversion en acres a été faite à Statistique Canada en utilisant le facteur un arpent égale 0.845 acre.

ROUNDING

Totals may not equal the sum of the parts due to conversion of imperial to metric units and the rounding of fractions to whole numbers where applicable.

CONFIDENTIALITY

All data released by the Census of Agriculture are subject to the confidentiality restrictions of the Statistics Act. Certain data have been suppressed to prevent the disclosure of any individual agricultural holding. Where necessary, the relevant data cell was replaced with an "x".

QUALITY OF DATA

The 1986 Census of Agriculture was designed to obtain complete and accurate data from all farms in Canada. In a statistical undertaking of the size and complexity of the census it is inevitable that some errors will occur.

An important part of census planning is to identify potential sources of errors so that appropriate quality controls can be built into the census operations to minimize error. For 1986, each returned questionnaire was checked for completeness, and wherever information was missing or inconsistent, follow-up contacts with the respondent were made to obtain the correct data. Where missing values could not be obtained or discrepancies reconciled, estimates were imputed.

Quality control procedures were applied throughout the census processing operations and results were thoroughly validated by comparing with the 1981 census and other sources, and by evaluating the impact of processing.

Following each census a complete evaluation of the quality of the data is carried out. At the time of the publication of this report only the following preliminary results were available.

Coverage

Coverage errors are inherent in any census and are generally difficult to measure. In order to get an appreciation of the effect of these errors, the 1986 census count of farms and major estimates were compared with 1981 count and estimates and with independent data derived from other Statistics Canada surveys and from agricultural industry administrative sources. Preliminary indications are that under-coverage did not appear to have significantly affected estimates for most major commodities.

ARRONDISSEMENT

La somme des parties peut différer des totaux dû à la conversion des unités impériales en unités métriques et à l'arrondissement des fractions en nombres entiers si nécessaire.

CONFIDENTIALITÉ

Toutes les données du recensement de l'agriculture sont assujetties aux dispositions concernant la Loi sur la statistique relative à la confidentialité. Certaines données ont été supprimées pour éviter la divulgation des activités d'une exploitation agricole particulière. Quand c'est nécessaire, les données pertinentes sont remplacées par un "x" dans les tableaux.

QUALITÉ DES DONNÉES

Le recensement de l'agriculture de 1986 a été conçu pour obtenir des données complètes et précises de toutes les fermes du Canada. Il est, toutefois, inévitable que dans une entreprise statistique de l'envergure et de la complexité du recensement, il se glisse des erreurs.

Une partie importante de la planification du recensement consiste à repérer les sources potentielles d'erreur de sorte que l'on puisse intégrer dans les opérations du recensement des contrôles de la qualité pertinents pour réduire le nombre d'erreurs au minimum. Pour 1986, chaque questionnaire retourné a été vérifié pour voir s'il était complet, et chaque fois qu'un renseignement manquait ou n'était pas cohérent, des suivis ont été établis auprès des répondants pour obtenir les données exactes. Lorsqu'il était impossible d'obtenir les données manquantes ou résoudre les divergences, des valeurs étaient imputées.

Tout au long des opérations de traitement de recensement, des méthodes de contrôle de qualité ont été appliquées et les résultats dûment validés en comparant ces derniers avec ceux du recensement de 1981 et avec d'autres sources, et en évaluant l'impact de chaque étape du traitement sur les données.

Après chaque recensement, une évaluation exhaustive de la qualité des données est entreprise. Dans cette publication seulement les résultats préliminaires suivants sont disponibles

Couverture

Les erreurs de couverture sont inhérentes à tout recensement et sont généralement difficiles à mesurer. Pour évaluer les conséquences de ces erreurs, les données sur le nombre des fermes et les principales estimations du recensement de 1986 ont été comparées au nombre des fermes et aux estimations du recensement de 1981 ainsi qu'aux données indépendantes tirées d'autres sondages de Statistique Canada et des sources administratives de l'industrie agricole. Selon des indications préliminaires, le sous-dénombrement ne semble pas avoir eu un impact important sur les estimations de la plupart des produits importants.

Non-Response

In addition to under-coverage, the census is also subject to non-response. Non-response to the entire questionnaire is usually attributable to an operator's refusal to complete the form or his absence from the residence when the census was taken. Efforts are made to obtain this information through follow-up or through legal means. Some questionnaires, however, arrive too late to be included in the results. In the 1986 census, the non-response rate amounted to less than 0.5 per cent.

Impact of Imputation

Where follow-up contacts are unsuccessful in obtaining missing information and systematic checking fails to resolve problems of inconsistent data, an imputation procedure is used to calculate approximations of the actual data. In general, imputed data have had little impact on the totals.

Specific Issues

The data received for some questions, for a variety of reasons, are too unreliable for publication. Thus the following items have been deleted:

Provincially owned grazing land in British Columbia - The estimates of unimproved grazing land does not include all provincially owned grazing land. This has always been the case in previous censuses. In 1986 attempts were made to account for all area of provincially owned grazing land; however, the data were not published by the census because of response errors.

Colonies of Bees - Due to under-coverage of beekeeping operations, the data cannot be published. An alternate source is the Statistics Canada publication **Production and Value of Honey and Maple Products**, Catalogue No. 23-211.

Subsurface Drainage in western Canada - Data for subsurface (tile) drainage for the four western provinces cannot be provided due to response errors.

Due to under-estimations, caution is advised when using the following items:

Chicken Production - There is some under-estimation of chicken production partly because some respondents tended not to include spent hens in the chicken production.

Electricity Expenses - In the 1986 Census of Agriculture many respondents did not report electricity. Many operators do not report electricity expenses because the farm business share is not separately metered and this may represent only a small portion of their total electricity expense.

Non-réponse

Outre le sous-dénombrement, le recensement est toujours exposé à un certain taux de non-réponse. L'absence de réponse au questionnaire dans sa totalité est d'ordinaire imputable au refus de remplir le formulaire ou à l'absence de l'exploitant des lieux de l'exploitation lorsque le recensement a été effectué. On s'efforce d'obtenir ces renseignements au moyen d'un suivi ou par des voies juridiques. Mais parfois les questionnaires sont reçus trop tard pour que les données soient incluses dans les résultats finaux. Pour le recensement de 1986, le taux de non-réponse s'élevait à moins de 0,5 pour cent.

Répercussions de l'imputation

Si, malgré le suivi, on ne réussit pas à obtenir les renseignements manquants, et que la vérification systématique ne permet pas de résoudre les problèmes au niveau de données incohérentes, on a recourt alors à une méthode d'imputation pour calculer des estimations vraisemblables des valeurs réelles. En général, les valeurs imputées ont très peu d'influence sur les totaux.

Considérations particulières

Les données recueillies dans certaines questions, pour diverses raisons, ne sont pas fiables. Aussi les détails suivants sont exclus de nos publications:

Terres en pacage appartenant à la province en Colombie-Britannique - Les estimations des terres non améliorées pour le pacage ne contiennent pas toutes les terres en pacage appartenant à la province. Ceci a toujours été le cas dans les recensements antérieurs. En 1986, on s'est efforcé de dénombrer toute la superficie des terres en pacage appartenant à la province. Cependant, les données recueillies ne peuvent être publiées à cause des erreurs dans les réponses.

Colonies d'abeilles - En raison d'un sous-dénombrement des opérations apicoles, les données ne peuvent être publiées. Une source de substitution est la publication de Statistique Canada **Production et valeur de miel et des produits de l'éclaircie**, no 23-211 au catalogue.

Drainage souterrain dans l'ouest du Canada - Les données sur le drainage souterrain dans les quatre provinces de l'ouest ne sont pas publiées à cause des erreurs dans les réponses.

En raison des sous-estimations, l'usage de ces rubriques doit être fait avec prudence:

Production de poulets - On constate une certaine sous-estimation de la production de poulets. Ceci est dû en partie au fait que certains répondants ont eu tendance à ne pas inclure les poules de réforme dans la production de poulets.

Consommation d'électricité - Au recensement de l'agriculture de 1986, de nombreux répondants n'ont pas déclaré de l'électricité. Bon nombre d'exploitants agricoles ne déclarent pas leurs frais d'électricité parce que la partie consommée par l'exploitation agricole n'est pas mesurée par un compteur distinct, et qu'elle ne représente peut-être qu'une petite partie du total de leurs frais d'électricité.

Maple Tappings - Based on the validation with other sources there is some indication of under-coverage of maple operations in the 1986 Census of Agriculture. This is assumed to have existed throughout all censuses; thus the data are comparable with that of previous censuses.

Value of Agricultural Products Sold - Based on comparison with other data sources there is some indication that the total value of agricultural products sold may be under-stated because of response errors (e.g. some operators reported net income instead of gross sales). The wording of the question has remained consistent over time; therefore, the data are comparable with that of previous censuses.

Due to additional questions in the 1986 Census of Agriculture, caution is advised when using the following items:

Improved Pasture - The 1986 census data for improved pasture are not directly comparable to previous censuses. This is due largely to the addition of a separate question on unimproved pasture in the 1986 census which enabled farm operators to allocate their pasture into improved pasture and unimproved pasture.

Unimproved land in western Canada - In 1981, unimproved land was under-reported in the western provinces. Therefore, direct comparisons between 1986 data and that of 1981 should be used with caution. Refer to the Statistics Canada 1981 publication *Evaluation of Data Quality*, Catalogue No. 96-918 for further information.

Tractors under 20 hp. - There was no question on tractors under 20 hp. in 1981; however, it would appear that many operators had included these in the next highest horsepower range (20 - 49 hp.). Therefore, the 1986 and 1981 data on tractors under 50 hp. are approximately comparable.

Swathers and Mower-conditioners - The number of swathers (self-propelled and pull type) has significantly declined in 1986 for all Atlantic provinces, Quebec and Ontario. This decline is assumed to be partially caused by the addition of a separate question in 1986 for mower-conditioners.

AVAILABILITY OF ADDITIONAL INFORMATION

The data presented in this publication represent only the most frequently requested tabulations. Data for small geographical areas are available on request as photocopies of computer printouts, or diskettes. Users can also request special tabulations of data. All requests will be serviced on a cost recovery basis.

Three other publications will be available (release dates to be announced): *A Profile of Canadian Agriculture*, Catalogue No. 96-113; *Socio-economic Characteristics of Farm Operators*, Catalogue No. 96-114; *Reference Maps*, Catalogue No. 96-115.

Further information may be obtained by contacting: Mr. Rick Burroughs, User Services, Agriculture Division, Statistics Canada, Ottawa, Ontario, Canada, K1A 0T6, Tel: (613) 951-8711.

Entailles d'érables - La comparaison des données du recensement de 1986 avec d'autres sources permet de croire que les érablières ont été sous-dénombrées. On suppose que ce sous-dénombrement a toujours existé lors des recensements antérieurs. Ainsi les données sont comparables à celles des recensements antérieurs.

Valeur des produits agricoles vendus - D'après la comparaison avec des données d'autres sources, il a lieu de croire qu'il existe une certaine sous-estimation de la valeur totale des produits agricoles vendus à cause des erreurs dans les réponses (par exemple, certains exploitants déclaraient leur revenu net au lieu de la valeur brute des produits agricoles vendus). L'énoncé de la question a toujours été le même. Par conséquent, les données sont comparables à celles des recensements antérieurs.

Dû à l'ajout des questions du recensement de l'agriculture de 1986, l'usage des rubriques suivantes doit être fait avec prudence:

Pâturage amélioré - Les données du recensement de 1986 ne sont pas directement comparables à celles du recensement de 1981. Ceci est dû à l'ajout d'une question distincte sur les pâturages non améliorés permettant ainsi aux exploitants de classer leurs pâturages soit dans la catégorie des pâturages améliorés soit dans celle des pâturages non améliorés.

Terre non améliorée dans les provinces de l'ouest - Dû au sous-dénombrement des terres non améliorées dans les provinces de l'ouest en 1981, toute comparaison directe entre les données de 1986 et celles de 1981 doit être faite avec prudence. Veuillez consulter la publication de Statistique Canada *Évaluation de la qualité des données*, no 96-918 au catalogue pour de plus amples renseignements.

Tracteurs de moins de 20 c.v. - En 1981, il n'y avait pas de question sur les tracteurs de moins de 20 c.v., cependant il semble que de nombreux exploitants les avaient déclarés dans la catégorie suivante (20 - 49 c.v.). C'est pourquoi les données de 1986 et de 1981 sur les tracteurs de moins de 50 c.v. sont plus ou moins comparables.

Andaineuses et faucheuses-conditionneuses - Le nombre des andaineuses (automotrices et tractées) a nettement baissé en 1986 pour toutes les provinces de l'Atlantique, le Québec et l'Ontario. On suppose que cette baisse est le résultat de l'ajout d'une question distincte sur des faucheuses-conditionneuses au recensement de 1986.

DISPONIBILITÉ DE RENSEIGNEMENTS COMPLÉMENTAIRES

Les données de cette publication représentent seulement les totalisations les plus souvent demandées. Les utilisateurs peuvent obtenir sur demande des données pour de petites régions géographiques sous la forme de photocopies d'imprimés d'ordinateur, de disquettes ou de tableaux définis par l'utilisateur. Pour chacun de ces produits, l'utilisateur devra accepter de défrayer les coûts reliés à leur production.

Trois autres publications seront disponibles: Un *profil de l'agriculture canadienne*, no 96-113 au catalogue, *Caractéristiques socio-économiques des exploitants de fermes*, no 96-114 au catalogue, *Cartes de référence*, no 96-115 au catalogue. La date de leur diffusion sera annoncée plus tard.

1986 Census of Agriculture

Francophones:

Si vous désirez un questionnaire en français, demandez à la téléphoniste de composer **ZENITH 0-1986**; vous serez alors mis en communication, sans frais, avec le bureau régional le plus près.

If you wish to complete a French questionnaire, call the long distance operator and ask for **ZENITH 0-1986** and you will be connected to the nearest Regional Office, without charge.

CONFIDENTIAL when completed

Only persons sworn to secrecy under the Statistics Act will have access to your completed questionnaire. Information derived from this questionnaire will be treated in accordance with the confidentiality provisions of the Act. Persons who have been sworn to secrecy under the Act are subject to prosecution if they violate these provisions.

Legal Requirement

The information sought in this questionnaire is collected under the authority of the Statistics Act. Everyone is required to provide this information.

INSTRUCTIONS

- Complete this questionnaire if you operate a farm, ranch or other agricultural holding (feedlots, greenhouses, nurseries, institutional farms, mushroom houses and fur farms) with sales of agricultural products during the past 12 months of \$250 or more.
- Agricultural products include any of the following:
 - livestock and poultry
 - dairy products and eggs
 - field crops
 - fruits and vegetables
 - mushrooms, greenhouse and nursery products, and sod
 - fur bearing animals
 - honey and beeswax
 - maple products
- Use your records, if possible. Otherwise, enter your best estimate.
- In cases where records are not kept on a calendar year basis, expenses, sales, etc. should be reported for the last complete fiscal year.
- Do not report fractions except where space has been provided.
- Complete only one questionnaire for each partnership operation.
- If you require additional questionnaires or assistance in completing this questionnaire, call the long distance operator and ask for **ZENITH 0-1986** and you will be connected to the nearest Regional Office without charge.

I - OPERATOR, JUNE 3, 1986

- The operator is the person responsible for the day-to-day decisions made in the operation of the holding.
- If the holding is operated as a partnership, enter the name and address of one of the partners. (Report other partner(s) in Question 4.)
- Please be sure only one agricultural questionnaire is completed per holding.

REASONS WHY QUESTIONS ARE ASKED

The Census of Agriculture is conducted once every five years and to be successful requires the participation of all farm operators.

Surveys and administrative records do provide some information regarding Canadian agriculture but it is the Census of Agriculture that provides statistical information on all farms on a consistent basis across Canada.

The following material explains the reasons for asking specific questions. However, it should be noted that each question in conjunction with others enables one to ascertain the importance and well-being of Canadian agriculture in relation to the total economy and to evaluate the impact of agricultural policies and programs.

An individual farmer's completed questionnaire is not made available to anyone except persons sworn to secrecy under the Statistics Act; however, the information provided will be combined with that of other farms and will be published.

Section I, Question 1 - Operator

Correct names and addresses are required to ensure that all farms are included and to avoid duplication.

Section II, Question 2 - Residence

This question identifies whether the farm operator lives on the holding. Data are used in conjunction with Census of Population data to enable social and economic comparison between rural farm, rural non-farm and urban populations.

Section II, Question 3 - Operation of Holding One Year Ago

This is principally an office-use question used to explain figures reported by new farm operators in response to questions that refer to the previous year.

Section III, Question 4 - Type of Organization

This information is used to categorize Canadian farms according to their business organization (e.g. individual farm, corporation). It is needed by departments of agriculture, farm organizations and others for analysis of the structure of the farming industry in Canada (e.g. is the number of corporate farms increasing?). Corporate names and names of partners are used to identify and correct situations where duplicate questionnaires are received for the same holding.

Section III, Question 5 - Land Area Units (acres, hectares, arpents)

This question gives the respondent a choice in the unit of land measure to be used in completing the questionnaire.

Section IV, Questions 6 to 9 - Location: Area Owned, Rented or Leased

These are principally office-use questions used to ensure complete farmland coverage by the Census and the correct identification of the farm headquarters. The split between "leased from governments" and "rented or leased from sources other than governments" ensures that all lands rented or leased are included.

Sections V and VI, Questions 10 to 97 - Area of Field Crops and Horticultural Products

Information on crop areas provides estimates of the total area of the various crops for Canada, the provinces and sub-provincial areas once every five years. The Census data provide the basis for making annual estimates of crop production. This information is essential for estimating agricultural production available for both the domestic and international markets and is used by organizations that are involved in marketing.

The Census is the key source for accurate estimates of infrequently occurring crops such as millet and triticale. The distinctions between "bearing" versus "non-bearing" trees and "area under cultivation" versus "area harvested or to be harvested" for berries, grapes and asparagus are required to forecast future production.

Section VII, Questions 98 to 105 - Summary of Land

The various breakdowns (e.g. improved land, unimproved land) provide an indication of land utilization. This information is important for government departments and farm organizations in comparing trends in land use patterns across Canada and over time.

Section VIII, Questions 106 to 109 - Greenhouses and Mushroom Houses

Production area estimates for greenhouse products and mushrooms are used by the public sector and by farm associations to monitor changes in capacity and supply.

Sections IX and X, Questions 110 to 149 - Poultry and Livestock

Questions on the number, type and age of livestock and poultry provide essential information for estimating inventories, production and future supplies of animals and animal products for domestic consumption and export. The Census provides the basic building block from which annual estimates are made. The information is vital for international negotiations on trade and for the efficient operation of the domestic market. This information is often used directly by farmers to make production and marketing decisions and in the form of market analysis and agricultural outlooks provided by government departments, private firms and the farm media. Age and weight breakdowns are used to distinguish between present and future production.

Questions 129, 135 and 141 (purebred registered animals) are included in the Census because of the importance of the export market for high quality Canadian livestock.

The question on the number of horses, goats, rabbits and other specialty livestock on farms provides specialty livestock producers with basic information about their sector.

Sections XI to XIV, Questions 150 to 159 - Fertilizer, Spraying and Dusting, Irrigation and Subsurface Drainage (Tile)

This information is used to measure the impact of these practices on agricultural production.

Section XV, Questions 160 to 171 - Farm Vehicles, Machinery and Equipment

The present market value of machinery enables policy analysts, farm organizations, universities, and others to study trends in farm capital requirements and return on investment. The type and number of farm machines is used to study mechanization trends (e.g. the change from two wheel drive to four wheel drive tractors). Machinery companies use the information to plan the location of service centres, while government departments study fuel use and calculate farm energy requirements to ensure adequate future supplies.

Section XV, Question 172 - Computers

This question will be used to determine if business computers are becoming important in farm management. Farm computerization could have a bearing in the future on the method of delivering information and extension services to farmers.

Section XVI, Question 173 - Market Value of Land and Buildings

The value of farm land and buildings provides a means of monitoring changes in values and is used to study the capital costs of farm operations.

Section XVII, Questions 174 to 185 - Farm Business Expenses

Expenditure questions are used to monitor trends in farm operating costs. The data, together with information on farm incomes, provide measures of the economic well-being of the farm sector and serve as a basis for formulating and evaluating stabilization programs.

Section XVII, Question 186 - Livestock Expenses Paid by Contract Firms

This is principally an office-use question used to explain cases where livestock are reported on the questionnaire but no corresponding livestock expenses are reported.

Section XVIII, Questions 187 and 188 - Hired Agricultural Labour

Data on hired labour are used by agricultural and manpower researchers and administrators for estimating and evaluating labour requirements and for planning training programs.

Section XIX, Questions 189 to 191 - Forest Products and Maple Tappings

These questions measure the value of forest products and number of maple tappings in Canada. Data are used, primarily by provincial departments, as a basis for making annual estimates of production.

Section XX, Question 192 - Value of Agricultural Products Sold

This question provides a means of grouping farms of similar economic size for publication purposes (e.g. all farms with sales under \$10,000, \$10,000 to \$25,000, etc.).

This information also allows government departments, farm organizations, universities and other researchers to study the distribution of farm income in Canada by geographic area (e.g. province, municipality or county).

Section XXI, Questions 193 and 194 - Off-Farm Work

This question makes it possible to identify the number of part-time and full-time farmers and to measure the impact on agricultural production.

Caractère légal et obligatoire

Les renseignements relatifs à ce questionnaire sont recueillis en vertu de la Loi sur la statistique. Tout le monde est tenu de fournir ces renseignements.

DIRECTIVES

- Remplissez ce questionnaire si vous exploitez une ferme, un ranch ou une autre exploitation agricole (parcs d'engraissement, serres, pépinières, fermes d'institutions, champignonnières et fermes d'animaux à fourrure) dont les ventes de produits agricoles se sont élevées à 250\$ ou plus au cours des douze derniers mois.
- La production agricole comprend l'un ou l'autre des produits suivants:
 - bétail et volailles
 - produits laitiers et oeufs
 - grandes cultures
 - fruits ou légumes
 - champignons, produits de serre et de pépinière, et gazon
 - animaux à fourrure
 - miel et cire d'abeille
 - produits de l'érable
- Si possible, consultez vos dossiers; autrement, donnez une estimation aussi précise que possible.
- Dans les cas où la tenue des dossiers n'est pas basée sur l'année civile, déclarez les dépenses, les ventes, etc. de la dernière année financière.
- N'indiquez pas les fractions, à moins d'indication contraire.
- Ne remplissez qu'un seul questionnaire pour chacune des exploitations d'une société en nom collectif.
- Si vous avez besoin de questionnaires supplémentaires ou de renseignements pour remplir le présent questionnaire, demandez à la téléphoniste de composer **ZENITH 0-1986**; vous serez alors mis en communication, sans frais, avec le bureau régional le plus près.

I - EXPLOITANT(E), LE 3 JUIN 1986

- L'exploitant(e) est la personne qui prend au jour le jour les décisions nécessaires à la bonne marche de l'exploitation.
- S'il s'agit d'une exploitation agricole en nom collectif, écrivez le nom et l'adresse d'un(e) des associé(e)s. (Déclarez les autres associé(e)s à la question 4.)
- Assurez-vous qu'un seul questionnaire agricole soit rempli pour cette exploitation.

VOICI CE À QUOI SERVENT LES QUESTIONS DU RECENSEMENT

Le recensement de l'agriculture a lieu tous les cinq ans, et pour qu'il soit une réussite, il faut que tous(les) les exploitant(e)s agricoles y participent.

Les enquêtes et les dossiers administratifs fournissent certes des renseignements sur l'agriculture canadienne, mais c'est le Recensement de l'agriculture qui fournit des renseignements statistiques sur toutes les fermes de manière cohérente à l'échelle du pays.

Les documents ci-après essaient d'expliquer la raison d'être de questions précises. Il convient cependant de noter que chaque question, en combinaison avec d'autres, permet d'évaluer l'importance et la situation économique de l'agriculture canadienne par rapport à l'ensemble de l'économie et d'évaluer l'impact des politiques et des programmes agricoles.

Le questionnaire rempli d'un(e) exploitant(e) agricole n'est mis à la disposition que des personnes qui ont prêté le serment du secret statistique en vertu de la Loi sur la statistique; cependant, les renseignements que vous fournirez seront combinés à ceux d'autres exploitations et seront publiés.

Section I, Question 1 – Exploitant(e)

Le nom et l'adresse exacts permettent de dénombrer toutes les fermes et d'éviter les duplicata.

Section II, Question 2 – Résidence

Cette question sert à déterminer si l'exploitant(e) réside ou non sur cette ferme. Ces données utilisées avec les données du Recensement de la population permettent la comparaison entre les populations rurales agricole, rurale non agricole et urbaine d'un point de vue social et économique.

Section II, Question 3 – Exploitation de la ferme il y a un an

Cette question dont les réponses sont utilisées principalement par Statistique Canada permet d'expliquer les données déclarées par les nouveaux(elles) exploitant(e)s en réponse aux questions posées sur les activités exercées l'année précédente.

Section III, Question 4 – Forme juridique

Les informations recueillies permettent de classer les fermes du Canada selon leur forme juridique (par exemple, ferme individuelle, société). Les ministères de l'agriculture, les organisations agricoles, etc. en ont besoin pour analyser la structure de l'industrie agricole au Canada (par exemple, pour déterminer si le nombre de sociétés augmente). Le nom des sociétés et des associé(e)s permet de détecter les questionnaires en double reçus pour une même exploitation et de corriger la situation.

Section III, Question 5 – Superficies (acres, hectares, arpents)

L'exploitant(e) peut exprimer la superficie de son exploitation en acres, en hectares ou en arpents.

Section IV, Questions 6 à 9 – Emplacement: terre possédée, louée ou louée à bail

Ces questions sont principalement utilisées par Statistique Canada et permettent, d'une part, de s'assurer que toutes les terres agricoles sont prises en compte dans le recensement et, d'autre part, de savoir où se trouve le siège social de l'exploitation. La distinction entre les terres "louées à bail des gouvernements" et celles "louées ou louées à bail d'autres sources" garantit que toutes les terres louées ou louées à bail sont prises en compte.

Sections V et VI, Questions 10 à 97 – Superficie des grandes cultures et cultures horticoles

Les informations fournies sur les superficies ensemencées permettent d'estimer, tous les cinq ans, la superficie totale consacrée aux différentes cultures à l'échelle nationale, provinciale et régionale. Les données du recensement servent de base aux estimations annuelles de la production agricole au Canada. Elles sont essentielles à l'estimation de la production agricole destinée aux marchés intérieur et international. Les organismes de commercialisation s'en servent aussi.

Le recensement constitue la source principale d'estimations précises des récoltes rares telles que le millet et le triticale. La distinction entre les arbres "productifs" et les arbres "non productifs" et entre la "superficie en culture" et la "superficie récoltée ou devant être récoltée" en ce qui concerne les petits fruits, les raisins et les asperges est nécessaire pour prévoir la production future.

Section VII, Questions 98 à 105 – Utilisation de la terre

Les répartitions (par exemple, terres améliorées et terres non améliorées) donnent une indication de l'utilisation des terres agricoles. Les ministères et les organismes agricoles se servent des données tirées de cette section pour comparer les tendances de l'utilisation des terres au Canada sur une période.

Section VIII, Questions 106 à 109 – Serres et champignonnières

Le secteur public et les associations agricoles se servent des estimations de la superficie cultivée en produits de serre et en champignons pour suivre l'évolution de la capacité et de l'offre.

Sections IX et X, Questions 110 à 149 – Volailles et bétail

Les réponses aux questions sur le nombre, les catégories et l'âge des bestiaux et des volailles constituent des informations essentielles à l'estimation des stocks, de la production et de la disponi-

bilité future des animaux et des produits d'origine animale destinés à la consommation nationale et à l'exportation. Le recensement fournit les informations de base à partir desquelles sont établies les estimations annuelles. Essentielles au déroulement des négociations commerciales internationales et au fonctionnement efficace du marché intérieur, les informations tirées de ces sections aident souvent les exploitant(e)s à prendre des décisions en matière de production et de commercialisation. Elles se présentent sous forme d'analyses de marché et de perspectives agricoles fournies par les ministères, les entreprises privées et les médias agricoles. Les répartitions selon l'âge et le poids servent à faire la distinction entre la production actuelle et ultérieure.

Les questions 129, 135 et 141 (sur les animaux de race pure enregistrés) figurent dans le recensement en raison de l'importance du marché d'exportation du bétail canadien de qualité supérieure. Les réponses à la question sur le nombre de chevaux, de chèvres, de lapins ou autre production spéciale de bétail fournissent aux producteurs(trices) des informations de base sur leur secteur.

Sections XI à XIV, Questions 150 à 159 – Engrais, pulvérisation et épandage de pesticides, irrigation et drainage souterrain

Les renseignements tirés de ces questions servent à mesurer l'incidence de ces techniques sur la production agricole.

Section XV, Questions 160 à 171 – Véhicules de ferme, machines et matériel

La valeur marchande actuelle des machines permet aux analystes de politiques, aux organisations agricoles, aux universités, etc. d'étudier les tendances des besoins en capital des exploitations agricoles et le rendement des investissements. Les données sur le type et le nombre de machines agricoles permettent aussi l'étude des tendances de la mécanisation, (par exemple la substitution des tracteurs à deux roues motrices au profit de ceux à quatre roues motrices). Les fabricants de machines se servent des informations pour déterminer l'emplacement des centres de service tandis que les ministères les utilisent pour étudier la consommation de carburant et calculer les besoins énergétiques futurs des fermes afin d'assurer des approvisionnements suffisants dans l'avenir.

Section XV, Question 172 – Ordinateurs

Les réponses à cette question serviront à déterminer si les ordinateurs jouent un rôle important dans la gestion des fermes. L'informatisation agricole influera sur le mode de distribution de l'information et de l'étendue des services aux exploitant(e)s.

Section XVI, Question 173 – Valeur marchande actuelle de la terre et des bâtiments

Les données sur la valeur des terres agricoles et des bâtiments permettent de suivre l'évolution de cette valeur et servent à étudier le coût des investissements des exploitations agricoles.

Section XVII, Questions 174 à 185 – Dépenses de l'exploitation agricole

Les réponses aux questions sur les dépenses permettent de suivre les tendances des coûts d'exploitation des fermes. Accompagnées des données sur le revenu des exploitations, elles permettent d'étudier la situation économique du secteur agricole et servent de fondement pour la formulation et l'évaluation des programmes de stabilisation.

Section XVII, Question 186 – Dépenses au titre du bétail payées en vertu d'un contrat de production

Cette question, dont les réponses sont utilisées principalement par Statistique Canada, permet d'expliquer les cas où le bétail a été déclaré sur le questionnaire, mais pour lequel il n'existe aucune dépense correspondante.

Section XVIII, Questions 187 et 188 – Main-d'œuvre agricole engagée

Les spécialistes agricoles et les administrateurs dans les domaines de l'agriculture et de la main-d'œuvre se servent des données sur la main-d'œuvre engagée pour estimer et évaluer les besoins en main-d'œuvre et pour planifier les programmes de formation.

Section XIX, Questions 189 à 191 – Produits de la forêt et entailles d'érable

Ces questions permettent de mesurer la valeur des produits de la forêt et de déterminer le nombre d'entailles d'érable au Canada. Les données sont utilisées, surtout par les ministères provinciaux, comme base des estimations annuelles de la production.

Section XX, Question 192 – Valeur des produits agricoles vendus

Les réponses à ces questions permettent de regrouper les exploitations agricoles dont le chiffre d'affaires est analogue (par exemple, exploitations dont les ventes sont inférieures à 10,000 \$, de 10,000 \$ à 25,000 \$, etc.), à des fins de publication.

Ces renseignements permettent par ailleurs aux ministères, organismes agricoles, universités et spécialistes agricoles d'examiner la répartition du revenu agricole au Canada par région (par exemple, province, municipalité ou comté).

Section XXI, Questions 193 et 194 – Travail hors exploitation

Cette section permet de déterminer le nombre d'exploitant(e)s à temps partiel et à plein temps ainsi que de mesurer l'incidence de ces caractéristiques sur la production agricole.
